

VectorBase

Bioinformatics Resource for
Invertebrate Vectors of Human Pathogens

VectorBase is a Bioinformatics Resource Center providing genomic, phenotypic and population-centric data to the scientific community for invertebrate vectors of human pathogens.

Data Sources

VectorBase incorporates data from other databases, scientific literature and other sources.

What can you do with VectorBase?

VectorBase provides information for numerous vector and non-vector species, access to data resources for those organisms, and a variety of tools to analyze these data sets. You can use the data we host or upload your own data for private analyses. See vectorbase.org/about for several sample queries.

Watch our 'Tour' and
other video tutorials:

Other resources and features:

- Genome Annotation
- Saving and sharing – data and analyses
- Visualizations for presentations and publications
- Help, documentation and workshops
- And much more!
